Masari — Week 3

Project item	Status
Project	Masari — an explainable AI guide for exploring the Egyptian Baccalaureate pathways.
Track	High schooler Guide.
HAI principle	User Control and Agency.
Target users	Grade 9 students in Egypt (middle school level) exploring Baccalaureate pathways, together with their parents and school counselors. All three groups are primary users.

Week 3 — Users and Data

Three Fictional Personas

All three personas are fictional. They are not based on real people, interviews, or survey data. They cover three user roles: a Grade 9 student (Omar), a parent (Hoda), and a school counselor (Hassan).

Persona 1: Omar Salah (student) — below-typical technical level

Detail	Description
Background	14 years old, Grade 9 in a public school in Alexandria. Lives with his parents and younger sister. Likes drawing and building models. Has not decided what he wants next; his parents want him to understand the options first.
Technical level	Below typical. Uses video and messaging apps. Types slowly and avoids unfamiliar menus and settings.
AI familiarity	Novice. Has heard of chatbots but has never used one.
Device and connection	Shared family tablet. Home Wi-Fi drops often.
Goals	Understand in simple words what the pathways are and how they differ. Talk about his options with his parents.

Detail	Description
Needs	Short text. One question at a time. Familiar, plain wording (Arabic preferred). A clear way to go back and undo.
Challenges	Long text and many choices at once make him stop reading. Unfamiliar terms. Fear of pressing the wrong thing and not being able to return.
Feelings about AI	Curious but cautious. Worries the chatbot will decide for him.
Accessibility need	Cognitive-load sensitivity: needs content in short chunks, his own pace, a plain-language option, and easy undo.

Persona 2: Hoda Ramadan (parent) — typical technical level

Detail	Description
Background	41 years old. Parent of a Grade 9 daughter and a younger son. Lives in a village in Minya governorate, where her daughter attends a public school. Helps run a small family shop. Her daughter has not decided what she wants next, and Hoda has heard different things from neighbors and relatives about the Baccalaureate pathways.
Technical level	Typical. Uses WhatsApp, Facebook, and video calls on her smartphone.
AI familiarity	Novice. Has heard about AI chatbots but has never used one. Is not sure what happens to the information she types.
Device and connection	Own smartphone with mobile data. The signal is weaker at home. Reads Arabic comfortably; does not need English.
Goals	Understand the pathway options well enough to talk with her daughter and the school counselor. Know whether the information is official and up to date.
Needs	Plain Arabic without technical or English terms. A clear statement of what the chatbot is and is not. Official sources she can name when she asks others. Short answers she can reread later.
Challenges	Education terms and rules that are new to her. Hard to tell official information from rumor. Fear of pressing the wrong thing. Worry that the tool will push her daughter toward one pathway.

Detail	Description
Feelings about AI	Curious but unsure. Wants help to understand the options, not a machine that decides for her daughter.
Accessibility need	None identified.

Persona 3: Hassan Nour (school counselor) — advanced technical level

Detail	Description
Background	38 years old. School counselor at a public preparatory school in Aswan. From a Nubian family; speaks a Nubian language at home, and Arabic at work. Reads English for professional material. He is the only counselor for many students, and students and parents ask him about the Baccalaureate pathways.
Technical level	Advanced. Comfortable with spreadsheets, school systems, and online forms. Prepares his own slides and handouts.
AI familiarity	Experienced. Uses AI chatbots from time to time to prepare guidance material. Knows they can be wrong and checks them against official documents.
Device and connection	Laptop in the school office and a smartphone. The school connection is stable but shared.
Goals	Check what Masari tells students and parents and confirm it matches the official rules. Use it to support his own guidance sessions, not to replace them. Understand how suggestions are produced so he can explain them.
Needs	Visible rules, factors, and sources with dates. A clear statement that the final decision stays with the student and family. A way to review how a suggestion was produced. Arabic first, with English terms where the official text uses them.
Challenges	Little time for each student. Rules change and official texts are hard to find. Worry that students will treat a chatbot score as a decision. Distrusts confident answers without sources.
Feelings about AI	Open but cautious. Supports a tool that helps students prepare for the conversation with him, not one that replaces it.
Accessibility need	None identified.

How the personas differ

Dimension	Omar (student)	Hoda (parent)	Hassan (counselor)
Technical level	Below typical	Typical	Advanced
AI familiarity	Novice (never used)	Novice (never used)	Experienced (from time to time)
Main need	Simple, paced, reversible steps	Plain Arabic, clear limits, and official sources	Visible rules, sources, and dates
Control wanted	Go back, skip, undo	Review and correct answers; the final choice stays with the family	Inspect the rules and check the sources

Bias-Check Notes

Basis of this review: The personas were reviewed by the project team for stereotypes, exclusion, and assumptions related to technical ability, AI familiarity, accessibility needs, and cultural background. An earlier persona set (Mariam and Yara, all students) was replaced by Hoda (parent) and Hassan (school counselor) after team feedback (see Prompt Log Entry 2); Omar was kept. The team's findings and any resulting changes are documented below. No real community members have reviewed the personas.

Area reviewed	What was reviewed	Finding and action
Names	Whether names suggest religion, class, region, or ability.	Omar, Hoda Ramadan, and Hassan Nour are presented with Egyptian names. Their names are not used to imply ability, income, or social status. Hassan's Nubian background is stated separately and is not inferred from his name. No clear stereotype was identified. No change was needed.

Area reviewed	What was reviewed	Finding and action
Gender and interests	Whether gender influences the personas' roles, responsibilities, or expected abilities.	The personas include a male student (Omar), a female parent (Hoda), and a male school counselor (Hassan). Their roles are based on their actual responsibilities in the education process. The team should avoid assuming that parenting responsibilities belong only to women or that counseling roles belong only to men.
Region, income, and devices	Whether technical ability or access to technology is linked to location or income.	The personas represent Alexandria, a village in Minya, and Aswan. Their access conditions vary: Omar uses a shared family tablet with unstable Wi-Fi, Hoda uses her own smartphone with weaker mobile signal at home, and Hassan uses a school laptop and smartphone with a stable shared connection. Technical ability is described separately from location and income. No direct relationship between these factors is assumed.
Family and pressure	Whether parents are portrayed as controlling or uninvolved, and whether students' decisions are represented fairly.	Omar's parents want him to understand the available options before deciding. Hoda wants to support her daughter's decision without pushing her toward a specific pathway. Hassan supports students and parents through guidance rather than making decisions for them. These descriptions show different roles without assuming that all families behave the same way.

Area reviewed	What was reviewed	Finding and action
Accessibility	Whether an accessibility need defines the persona and whether the need is described respectfully.	Omar's cognitive-load sensitivity is described through practical interaction needs, including short information chunks, one question at a time, plain language, working at his own pace, and the ability to undo actions. No accessibility needs are identified for Hoda or Hassan. This does not mean they have no accessibility needs; they are simply not specified in the available descriptions. **Optional suggestion for the team:** Our planned interface (Week 4) promises keyboard use, screen reader support, and 200% text size, and no persona currently needs these. Decide whether to add a screen-reader or low-vision need to one persona: [NEEDS TEAM INPUT]. No persona has been changed.
Cultural background	Whether Hassan's Nubian background is represented meaningfully and linked to unsupported assumptions.	Hassan's Nubian background is described through his family and language. He speaks a Nubian language at home and Arabic at work, and reads English for professional material. His background is not used to imply his technical ability, professional skills, or personal characteristics. No community review has been conducted, so the representation may benefit from further feedback.
Language	Whether the personas' language preferences are represented accurately and whether the product assumes unsupported language capabilities.	Omar prefers Arabic and needs familiar, plain wording. Hoda reads Arabic comfortably and does not need English. Hassan prefers Arabic-first content, with English terms where they appear in official documents. These are individual language preferences. The product's actual language support should be stated according to the team's confirmed decision.
Persona set and user roles	Whether the persona set covers all primary users, or assumes every persona is a student.	Finding: the earlier draft assumed every persona was a student, which excluded parents and counselors. Action: replaced Mariam and Yara with Hoda and Hassan, keeping Omar.

Area reviewed	What was reviewed	Finding and action
Rural and low-technical-experience representation	Whether Hoda (a village parent with a family shop, novice AI user) risks a stereotype of rural or less-educated users.	Finding, based only on her description: Hoda lives in a village in Minya and helps run a small family shop. Her technical level is described as typical (WhatsApp, Facebook, and video calls on her own smartphone), she reads Arabic comfortably, and her goals are specific (understand the options, know whether information is official). Her description does not state her education level or income, and her novice AI familiarity is described as a lack of experience with AI chatbots, not as a result of where she lives. Action: no change was made to Hoda's description. Whether the combination of village, family shop, and novice AI use still risks a stereotype, and whether the team agrees with this finding: [NEEDS TEAM INPUT]

Data Source Description

What the data is. Masari plans to use three kinds of data. (1) Official public rules of the Egyptian Baccalaureate: the pathways, the subjects in each grade, and the scoring and exam rules. The working source is Ministerial Decree 150 of 2026 (dated 18 August 2026), which builds on Decree 213 of 2025. (2) A team-written pathway table that links each pathway to its documented subjects and to the relevance values used by the rule-based scoring. It depends on (1) and has not been validated. (3) Fictional student profiles and assessment answers written by the team for the test set of at least 30 labeled prompts. No real student data is used to build the system.

Size. Decree 150 of 2026 defines 4 pathways, 8 second-year options, 8 third-year subjects, and 6 scored subjects (600 marks total). Decree 213 of 2025 remains unchecked. The dataset will include 4 pathway rows and at least 30 test prompts.

Source. The sources for (1) are in the Source list below (checked on 27 October 2026). (2) and (3) are created by the team. S1 is a third-party copy of the decree on a legal website, not an official Ministry site, and it shows only 9 of the decree's 11 articles (articles 4 and 5 are missing). S4 and S5 were only seen as summaries. The decree text must be checked against the Official Gazette or the Ministry of Education

website before any fact is shown to users. Official copy obtained: [NEEDS TEAM INPUT].

License and permission. Egyptian copyright law (Law 82 of 2002, Article 141) reportedly excludes official decrees from copyright protection, but this law reference is unverified. The team must verify the law and check the S4/S5 terms. Use official decrees as sources, cite websites without copying their text, and use fictional data owned by the team.

Why it fits. Masari provides users with guidance based on official, dated rules rather than model memory. It tracks changes and flags unverified facts, supporting User Control and Agency and transparency. Fictional profiles avoid collecting minors' personal data; future real-user tests require consent, anonymity, and any necessary approvals.

Source list

#	Source (click to open)	Type	What it provides and how far it was checked
S1	LawHub: Decree 150 of 2026, full text	Third-party copy of an official decree	Full text read. Gives the four pathways, the subjects for grades 2 and 3 of secondary, the 600-mark total, and exam entry rules. Needs comparison with an official copy.
S2	Egyin: news report on Decree 150 of 2026	News report	Says the decree was published in the Official Gazette. Summary only; page not read in full.
S3	Youm7: Decree 213 of 2025 published in the Gazette	News report	Says the Baccalaureate is optional, free, and three years long, and equals the General Secondary Certificate. Summary only.
S4	Ministry of Education: news page on the Baccalaureate proposal	Official ministry site	Describes the January 2025 proposal (7 subjects over two years, 4 pathways). The site blocked automated access, so only the search summary was seen. Older than S1.

#	Source (click to open)	Type	What it provides and how far it was checked
S5	Cairo Governorate portal: university admission for Baccalaureate graduates	Official government portal	Reports a Ministry statement (August 2026) that admission follows the same coordination system as the General Secondary Certificate. Summary only.

Appendix A — Week 3 Prompt Log

Only prompts that were actually provided to this draft are recorded. Week 2 prompts (Claude and Gemini concept drafts) are recorded in Appendix A of the Week 2 document (Week_02_revised.docx).

Entry 1 — Initial Week 3 and Week 4 draft

Field	Details
AI tool name	Claude (Sonnet 5.5)
Exact prompt	**I will provide you with our project document for Masari. Your task is to complete the required deliverables for Week 3 and Week 4 only, following the requirements below exactly.** **Output Format — Mandatory** • **Deliver the final work as a well-organized Microsoft Word document (.docx), not Markdown or plain text.** • **Use clear section headings, subheadings, readable paragraphs, and properly formatted tables wherever appropriate.** • **Keep the formatting professional, consistent, and suitable for a university project submission.** • **Use a simple, readable font, consistent heading styles, page numbers, and reasonable spacing.** • **Do not create unnecessary cover pages, decorative elements, or extra sections unless required.** • **Provide the completed .docx file for download.** **General Rules** • **Use the provided Masari project document as the primary source.** • **Complete only the deliverables explicitly required for Week 3 and Week 4.** • **Keep the writing clear, direct, concise, and specific. Avoid unnecessary explanations, repetition, and overly long paragraphs.**

Field	Details
	• **Do not add extra deliverables, features, assumptions, or sections that are not requested.** • **Do not invent project decisions, data sources, licenses, implementation details, prompt history, test results, or evidence.** • **If essential information is missing, mark it clearly as [NEEDS TEAM INPUT] rather than guessing.** • **Keep all sections consistent with the actual project.** **Week 3 — Users and Data** **1. Three Fictional Personas** **Create exactly three fictional personas representing:** • **Below-typical technical level.** • **Typical technical level.** • **Advanced technical level.** **Across the three personas, include:** • **At least two novice AI users.** • **At least one persona with an accessibility need.** • **Varied cultural backgrounds.** • **The project's relevant context: Grade 9 students in Egypt exploring the Egyptian Baccalaureate pathways.** **For each persona, include only useful details such as their background, technical level, familiarity with AI, goals, needs, challenges, and relevant accessibility needs if applicable. Make the differences between personas clear.** **All personas must be fictional. Do not use real people's personal information.** **2. Bias-Check Notes** **Explain what was reviewed in the personas, including names, examples, and contexts. Identify any stereotypes or exclusions found and state what was changed to address them.** **Present this information in a concise, clearly structured table. Do not claim that a bias was found or a change was made unless it is actually supported by the work. Mark unresolved items as [NEEDS TEAM INPUT].** **3. Data Source Description** **Write approximately half a page describing:** • **What data the project uses or plans to use.** • **The size of the dataset, if known.** • **The source of the data.** • **The license or permission status.** • **Why the data is appropriate for the project's track and purpose.**

Field	Details
	The data must be public, synthetic, or fictional, as required. Do not invent a source, dataset size, license, or permission. If these details have not been decided or verified, mark them as [NEEDS TEAM INPUT]. **Use the actual prompt history and available outputs. Do not fabricate previous prompts or outputs. Clearly mark any missing records as [NEEDS TEAM INPUT].** **Week 4 — Milestone 2: Project Plan v1** **1. Journey Maps** **Create one journey map for each of the three Week 3 personas.** **Each map must include these stages:** **1. Start.** **2. Ask.** **3. Understand the answer.** **4. Act or fix a problem.** **5. Finish.** **For each stage, identify the persona's actions, relevant pain points, and where the project's human-AI interaction principle helps. Keep the maps concise and specific to Masari.** **2. Measurable Objectives** **Provide at least four measurable metrics, including:** • **AI-quality metric(s).** • **User-experience metric(s).** • **Metric(s) directly related to the project's HAI principle(s).** **For every metric, specify:** • **Metric name.** • **How it will be measured.** • **Numerical target.** • **How the measurement will be collected.** **Do not present proposed targets as achieved results. If a target or measurement method has not been agreed upon, mark it as [NEEDS TEAM INPUT].** **3. HAI Principle Ladder v1** **Include at least these four levels:** **1. Inform.** **2. Explain.** **3. Allow control.** **4. Enable feedback.** **For each level, state how it applies to Masari and link it to at least one measurable objective from the previous section. Do not add extra ladder levels unless required.** **4. Tool Choices**

Field	Details
	Describe the project's choices for: • **Model: hosted API or open-source model.** • **Backend and user interface.** • **How answers will be grounded in a reliable knowledge source.** **Use decisions documented in the project materials. Do not silently make unresolved choices. Mark undecided items as.** **5. Week 4 Prompt Log** **Include the required prompt log for Week 4, using the same fields:** • **Exact prompt.** • **AI tool name.** • **Actual output or concise output description.** • **What was changed and why.** **Do not fabricate prompt history. Mark missing records as.** **Final Document Structure** **Organize the Word document in this order:** 1. **Week 3 — Users and Data** 2. **Three Fictional Personas** 3. **Bias-Check Notes** 4. **Data Source Description** 5. **Appendix A — Week 3 Prompt Log** 6. **Week 4 — Milestone 2: Project Plan v1** 7. **Journey Maps** 8. **Measurable Objectives** 9. **HAI Principle Ladder v1** 10. **Tool Choices** 11. **Week 4 Prompt Log** **End with a short section listing only the unresolved items.** **Before creating the file, check that every required deliverable is included, all three personas meet the constraints, tables are readable, metrics have numerical targets or are clearly flagged, and no unsupported information has been invented.** **Return the completed Microsoft Word (.docx) file. Do not return Markdown as the final deliverable.**
What it gave (actual output)	Claude produced this Word document draft: three personas, bias-check table, data source description, journey maps, measurable objectives with proposed targets, HAI Principle Ladder v1, tool choices, and the list of unresolved items. The same output covers Week 3 and Week 4.

Field	Details
What was changed and why	[NEEDS TEAM INPUT]

Entry 2 — Persona revision (team feedback)

Field	Details
AI tool name	Claude Sonnet 5.5
Exact prompt	Please update the document based on the following feedback and make sure all changes are consistent throughout the entire document. **1. Update the Bias-Check Table** The Bias-Check table still refers to Mariam and Yara and assumes that all personas are students. Please update it to reflect the new personas and their actual characteristics. Make sure the bias-check analysis is consistent with the updated personas. **2. Revise the First Table on Page 1** The first table on the first page currently describes parents and counselors as "secondary supporters." This is no longer accurate. Parents and counselors are now considered **primary users**, not secondary supporters. Please revise the wording to clearly reflect their status as primary users and ensure the description is consistent with the updated user structure throughout the document. **3. Update the Prompt Log** The Prompt Log is missing an entry documenting the request to update the personas. Please add a new entry documenting this modification. If Claude was used to make the changes, include: • The actual prompt used to request the persona updates. • A brief description of the changes made based on that prompt. Make sure the prompt is accurately documented rather than creating a generic or fabricated prompt. **Important Instructions** • Keep Omar as an existing persona. • Replace Mariam and Yara with Hoda and Hassan wherever relevant. • Do not assume that all personas are students.

Field	Details
	• Ensure consistency across all sections, tables, journey maps, and references. • Preserve the existing document structure, formatting, writing style, and level of detail. • Do not make unrelated changes or remove existing content that is still relevant. • Review the entire document after editing to ensure there are no outdated references to Mariam or Yara and that parents and counselors are correctly identified as primary users. Please apply these changes directly to the document and provide the updated version.
What it gave (actual output)	An updated version of the whole document (personas, bias table, journey maps, and first table). The revised persona set is: Omar Salah (Grade 9 student, below-typical technical level), Hoda Ramadan (parent, typical technical level), and Hassan Nour (school counselor, advanced technical level).
What was changed and why	Changed: the earlier persona set (Mariam and Yara, with every persona a student) was replaced by Omar (student), Hoda (parent), and Hassan (school counselor). Why: team feedback said parents and school counselors should be treated as primary users of Masari, not only as secondary supporters, so the personas needed to cover these roles.

Entry 3— Revision request for this document

Field	Details
AI tool name	Claude Sonnet 5.5
Exact prompt	I am attaching our Week 3 document for the Masari project. Revise it by applying ONLY the changes below. Keep the existing structure, formatting, writing style, and tables. Do not make unrelated changes and do not alter the personas' content except where stated. 1. Primary users: In the first table, "Target users" still says parents and school counselors are "secondary supporters". Change it to say Grade 9 students, parents, and school counselors are all primary users. Check the whole document for any other outdated wording. 2. Bias-Check Notes:

Field	Details
	- Remove or correct the sentence "No earlier persona draft was available for comparison". The earlier persona set (Mariam and Yara, all students) was replaced by Hoda (parent) and Hassan (school counselor) after team feedback (see Prompt Log Entry 2). - Add one row to the table: "Persona set and user roles". Finding: the earlier draft assumed every persona was a student, which excluded parents and counselors. Action: replaced Mariam and Yara with Hoda and Hassan, keeping Omar. - Add one row: "Rural and low-technical-experience representation". Review whether Hoda (a village parent with a family shop, novice AI user) risks a stereotype of rural or less-educated users. State honestly what the team found and what it kept, based only on her actual description. If no change was made, say so. If unsure, mark [NEEDS TEAM INPUT]. 3. Accessibility (OPTIONAL, include only as a clearly marked suggestion for the team): Add a short note under the Accessibility row saying our planned interface (Week 4) promises keyboard use, screen reader support, and 200% text size, and that no persona currently needs these. Mark "Decide whether to add a screen-reader or low-vision need to one persona" as [NEEDS TEAM INPUT]. Do not change any persona yourself. 4. Data Source Description: Shorten it to about half a page covering: what the data is, size, source, license or permission, and why it fits the track. Move the source table (S1 to S5) into a separate short "Source list" under it. Keep every fact and every caveat (S1 is a third-party copy with only 9 of 11 articles; S4 and S5 were only seen as summaries; the law reference is unverified). Add one sentence that the decree text must be checked against the Official Gazette or the Ministry website before any fact is shown to users, and mark "Official copy obtained" as [NEEDS TEAM INPUT]. 5. Principle consistency: The HAI principle is User Control and Agency. Make sure the top table and all text use this wording consistently. 6. Prompt Log (Appendix A): - Entry 1 is missing the row "What we changed and why". Add it as [NEEDS TEAM INPUT] if the team made no recorded change; do not invent one. - Entry 2: fix "What it gave" to say it produced an updated version of the whole document (personas, bias table, journey maps, first table), not only the personas. - Add a placeholder entry: "Entry 3 — Source search for the data description" with fields for tool, exact prompt, output, and changes, all marked [NEEDS TEAM INPUT]. If no AI tool was used for finding sources, the team will delete it. - Add a new entry for this revision request, quoting this prompt exactly.

Field	Details
	Rules: Do not invent data, sources, licenses, prompts, or evidence. Mark missing information as [NEEDS TEAM INPUT]. Return a .docx file, then list in a short bullet list exactly what you changed.
What it gave (actual output)	A revised version of this Word document with the requested changes applied, and a short list of what was changed.
What was changed and why	Changed: Target users now says Grade 9 students, parents, and school counselors are all primary users. Changed: Bias-Check Notes basis sentence corrected; added the rows "Persona set and user roles" and "Rural and low-technical-experience representation"; added an optional, clearly marked accessibility suggestion for the team. Changed: Data Source Description shortened, source table moved into a "Source list" under it, and the Official Gazette check sentence added. Changed: wording made consistent with User Control and Agency; Prompt Log Entries 1 and 2 corrected, Entry 3 placeholder and this entry added. Why: to apply the team's requested revisions only. Items the team still has to decide are marked [NEEDS TEAM INPUT].

Entry 4 — Small fixes to the revised document

Field	Details
AI tool name	Claude Sonnet 5.5
Exact prompt	I am attaching our Week 3 document for the Masari project (Week_03_revised.docx). Apply ONLY the small fixes below. Keep the existing structure, formatting, writing style, and tables. Do not make unrelated changes and do not alter the personas. 1. File reference: In "Appendix A — Week 3 Prompt Log", the intro sentence says the Week 2 prompts are recorded in "the Week 2 document (Masari.md)". Replace "Masari.md" with "Week_02_revised.docx". 2. Target users wording: In the first table, the "Target users" row reads awkwardly. Rewrite it as one clear sentence, for example: "Grade 9 students in Egypt (middle school level) exploring Baccalaureate pathways, together with their parents and school counselors. All three groups are primary users." Do not change the meaning. 3. Prompt Log: Add a new entry (Entry 5) for this request. Tool: Claude Sonnet 5.5. Exact prompt: this prompt, quoted exactly. What it gave: a short

Field	Details
	description of the revised file. What was changed and why: a short description of the two fixes above. Do not change Entries 1 to 4. Rules: Do not invent data, sources, licenses, prompts, or evidence. Mark missing information as [NEEDS TEAM INPUT]. Return a .docx file, then list in a short bullet list exactly what you changed.
What it gave (actual output)	A revised version of the Week 3 Word document with the two small fixes applied and Entry 5 added.
What was changed and why	Changed: the file reference in the Appendix A intro now says Week_02_revised.docx instead of Masari.md; the "Target users" row in the first table was rewritten as one clear sentence with the same meaning; this entry was added. Entries 1 to 4 and the personas were not changed. Why: to apply the team's requested small fixes only.
